

# THE VALUE METHODOLOGY WORKSHOP

*Teamwork is like a Lighting Bolt - - - - -  
We don't realize it's power until we've been hit !!!*

## OVERVIEW

The Value Methodology is governed by a structured decision-making process to assess value. When unsatisfactory value is found, the following VM job plan is followed.

**Pre-Event:** Before VM analysis begins, a foundation of good human relations, team work and management support should exist to promote effective interaction and a focus on specifics.

**Information:** Decision quality can be no better than the information quality upon which it is based. Value methodologies improve the quality of information. All costs and value objectives are explored.

**Function:** Function best defines needs and creative solution opportunities. Function analysis is the heart of VM.

**Speculation/Creativity:** Maximizing the alternative solutions that accomplish the identified function.

**Evaluation:** Thorough analysis of each alternative by a variety of criteria is critical to selecting the best solution.

**Development/Recommendation:** The VM study's findings and recommendations for improvement are distinctly communicated, in an "out-brief" to decision makers having the authority for implementation.

**Implementation:** Rapid approval and implementation of the recommended alternatives, is sought, to promote realization of the maximum benefit available from the findings of the VM workshop.
